Bibliography of Oyster Parasites and Diseases

By

CARL J. SINDERMANN, Fishery Biologist

Bureau of Commercial Fisheries Biological Laboratory
Oxford, Md. 21654

ABSTRACT

The bibliography is oriented toward the diseases that affect oysters and is not concerned with human diseases that may be transmitted by raw shellfish. References to parasites and diseases of pearl oysters (Pteriidae) have been included, even though such bivalves are not true oysters (Ostreidae). References to mortalities of oysters have been included only if a pathogen was associated or suspected. Particular emphasis has been placed on disease states resulting from an infectious agent or parasite invasion.

INTRODUCTION

Because of their worldwide economic importance, oysters are among the most thoroughly studied of marine invertebrates. Disease is one aspect of oyster biology that has received particular attention. Literature on parasites and diseases of oysters has accumulated at a surprising and accelerating rate. Preparation of a recent review of diseases of Mollusca and Crustacea provided an opportunity to assemble many of the publications and references on oyster diseases-- a large part of which could not be included in a general review. Consequently, it seemed useful to publish a bibliography concerned specifically with oyster diseases, in view of the amount of material available and the current expanding interest in the subject.

Created in 1849, the Department of the Interior--a department of conservation--is concerned with the management, conservation, and development of the Nation's water, fish, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.
